DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: mistyping on Page 5, line 11, the prongs having reference number 118.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3, 5-13, 15-31, 33-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jui-Yuan in view of Rochel et al.

Jui-Yuan discloses a heat dissipation apparatus for a computer comprising a heat sink 22 having a bottom surface attached to a CPU and having prongs 223 extending from an upper surface, the interior of the heat sink receive cooling fluid generated by fan modules 23 and 24 disposed on inlet and exhaust ends of the heat sink, the heat sink is made of a thermally conductive metal. Jui-Yuan discloses the claimed invention except enclosing portion that encloses the interior passage. Rochel discloses the heat sink having the enclosed fluid passage. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to have enclosed interior as disclosed by Rochel et al. in the structure disclosed by Jui-Yuan in order to provide optimal cooling by streamlining airflow.

Art Unit: 2835

4. Claims 4, 14 and 32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jui-Yuan in view of Rochel et al. and further in view of Katsui.

Jui-Yuan and Rochel disclose the claimed invention except the prongs being cylindrical rods. Katsui discloses the heat sink having cylindrical rods. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to use cylindrical rods as disclosed by Katsui in the structure disclosed by Jui-Yuan for enhanced heat dissipation by turbulent airflow facilitated by cylindrical rods.
